

# Aggregates

3/4 stones

6mm stones

Crusher run

Washed sand

Khayah offers a wide range of durable, versatile aggregates from our quarry. Sourced from Sternblick quarry all our products are thoroughly tested at our dedicated in-house laboratory to ensure only the highest quality products are supplied.

## Crusher run

Well graded crushed rock in the size range 0-125mm

What is it for?

Generally used as bulk fill to stabilise structures and pavements. May also be used for footpaths or as a temporary running surface.

## 6mm stones

Graded course sand and gravel

What is it for?

Ideal for use in concrete, precast products

## 20mm stones (3/4 inch)

Graded coarse aggregates including crushed limestone, granite and gritstone, crushed and uncrushed gravel, and secondary aggregates.

What is it for?

Ideal for general construction use, civil engineering (pipe bedding and surround, filter media) and for decorative uses.

## Washed sand

The preparation of sand consists of five basic processes: natural decomposition, extraction, sorting, crushing and washing.

What is it for?

Used to provide bulk, strength and other properties to construction materials like asphalt, mortar and concrete. Used in the production of concrete and mortar.
