Khayah WaterShield waterproofing Cement

KHAYAH

Khayah WaterShield™ Waterproofing Cement

Recommended for:

Building Foundations | Concrete Water Tanks | Canals | Swimming Pools

WaterShield™ by Khayah is Zimbabwe's first and only one of a kind waterproofing cement made by Khayah, WaterShield is specially formulated with **Water Resistant Hydro Defence Technology**.

WaterShield™ waterproofing cement helps in protecting homes from moisture and water seepage whilst promoting damp free, long life construction. It defends the value of your property, helps keep your home free from mould and mildew and is of a higher-class strength than comparable products, making it effective for special foundations.

How WaterShield works

Water generally weakens the structural integrity and beauty of buildings. When water passes through standard cement based or concrete structures, especially on foundations, it will dampen the walls, weaken the foundations and crack plaster, leading to the peeling of paint. Additionally, dampness in buildings promotes mould growth which may compromise air quality and well being.

WaterShield™ Cement has the following characteristics which help eliminate these problems.

- **Resists** the absorption of water when made into concrete or mortar for building foundations. This helps the building retain its value for reselling without a loss in structural integrity.
- **Prevents** the loss of water from water-containing structures such as swimming pools, canals and reservoirs.
- **Effective** for reducing rising damp in brickwork when used in mortar. This helps prevent molds and mildew
- **Retains** its classic Lafarge strength in all its applications, it rated 32.5R and is class leading in its superior strength.
- **Corrosion resistant.** Water transports salts & acid ions resulting in corrosion of steel reinforcements.
- **Absorbs much less** water by capillary action and acts as a corrosion resistant solution.

Trust WaterShield™ for

Damp Free Construction

Freedom from Seepage

Long Life of Construction

Less Shrinkage Cracks

Corrosion Resistance

Area of application

WaterShield™ can be used for a range of applications including:

- Building Foundations including special foundations
- Slabs
- Beam & Column construction
- Canals
- Swimming pools
- Balconies

For the Home Owner

WaterShield™ will defend the value of your home, promoting its structural integrity at foundation level from water damage and from mould and mildew if used for walls.

For the retailer

WaterShield™ will help you turn-around your stock faster with a highly demanded product, and allow you to earn competitive margins. You will grow your range and your profit with cement from the world's finest building solutions company, Lafarge

For the builder

WaterShield™ Cement contains superior waterproofing technology, and is mixed in exact ratios with an industrial mixer – this allows for superior product consistency and reliability when it comes to application. You don't have to worry about creating a blend of different products, and struggling to mix these right.

Trust WaterShield™ cement for strong, durable and damp free long lasting homes
